## **Texas Red Azide**

Catalog Number	Packaging Size
C310	1 µmol

Storage upon receipt: -20°C, protected from light

## Introduction

Click chemistry describes a class of chemical reactions that use bio-orthogonal or biologically unique moieties to label and detect a molecule of interest in mild, aqueous conditions. The click reaction involves a copper-catalyzed triazole formation from an azide and an alkyne. The azide and alkyne moieties can be used interchangeably; either one can be used to tag the molecule of interest, while the other is used for subsequent detection.

The Texas Red azide is reactive with terminal alkyne via a copper-catalyzed click reaction that allows the subsequent visualization by fluorescence spectroscopy.

## **Specifications**

Label:	Texas Red	
Ex/Em:	594/614 nm	0 N+
<b>Detection Method:</b>	Fluorescent	
Solubility:	DMSO, DMF	V V V V
Molecular Weight:	762.90	SO <sub>3</sub>
Product Size:	1 μmol	
Storage Conditions:	-20 °C, protect from light	0 N <sub>3</sub>
Shipping Condition:	Room Temperature	o N

## **Applications**

Click chemistry labeling
