Cy5 Alkyne

| Catalog Number | Packaging Size |
|----------------|----------------|
| C313 | 1 µmol |

Storage upon receipt: -20°C, protected from light

Introduction

Click chemistry describes a class of chemical reactions that use bio-orthogonal or biologically unique moieties to label and detect a molecule of interest in mild, aqueous conditions. The click reaction involves a copper-catalyzed triazole formation from an azide and an alkyne. The azide and alkyne moieties can be used interchangeably; either one can be used to tag the molecule of interest, while the other is used for subsequent detection.

The Cy5 alkyne is reactive with azide via a copper-catalyzed click reaction that allows the subsequent visualization by fluorescence spectroscopy.

Specifications

| Label: | Су5 | |
|--------------------------|----------------------------|--|
| Ex/Em: | 650/665 nm | "O ₃ 8 90°" |
| Detection Method: | Fluorescent | HÔN HÔN HÌ |
| Solubility: | DMSO, DMF | Yellow I. |
| Molecular Weight: | 913.20 | 1 |
| Product Size: | 1 µmol | J. Hoodoo |
| Storage Conditions: | -20 °C, protect from light | 8 |
| Shipping Condition: | Room Temperature | |

Applications

Click chemistry labeling
