

## **Product Information**

#### eLuminol<sup>™</sup> Protein Gel Stain, 1000X

Catalog Number	Packaging Size	
P003A	0.5 mL	
P003B	1 mL	

#### Storage upon receipt:

-	2	-25°	2
•		-/:)	

Protect from light

Ex/Em: 300, 460/600 nm

#### **Product Description**

**eLuminol<sup>™</sup> Protein Gel Stain** is a high sensitive fluorescent stain designed for detecting proteins in polyacrylamide gels. Compared to traditional Coomassie® stains, **eLuminol<sup>™</sup> Protein Gel Stain** has the following advantages:

- High sensitivity. eLuminol can detect as little as 0.5 ng protein.
- Simple and fast staining. After electrophoresis, the gel is simply stained, and washed. Take about 90 min.
- Compatibility with standard laboratory equipment. Stained protein can be viewed using a 300 nm UV transilluminator, blue light transilluminator or a laser scanner.
- Wide linear detection range. At least three orders of magnitude.
- Compatible with downstream analysis: Compatible with MS and sequencing.
- Stable: Stable at room temperature for 1 year.

### **Staining Protocol**

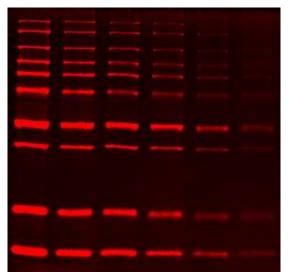

**Note:** The protocol is optimized for standard 1 mm thick, 8 cm × 8 cm SDS-PAGE minigels. Larger or thicker gels require additional volumes of reagents or longer incubation times.

- 1. **Run** gel as usual according to your standard protocol.
- Prepare1X eLuminol<sup>™</sup> stain solution by diluting 1,000X eLuminol<sup>™</sup> Protein Gel Stain with a combination of water, methanol and acetic acid. For 1 mL of 1,000X eLuminol Stain, add 600 mL of water, 300 mL of methanol, and 100 mL of acetic acid. Store the 1X eLuminol Stain solution in a plastic bottle at room temperature or at 4 °C protected from light.

- 3. Stain gel with 1X eLuminol Stain solution (50~80 mL) at room temperature for 90 min with shaking.
- 4. **Wash** gel with 100 mL wash solution (10% methanol, 7% acetic acid) for 20 min with shaking.
- 5. **Image** gel with a 300 nm UV transilluminator, blue light transilluminator or a laser scanner.

# Using eLuminol™ Stain as a Post-Stain (Optional)

- 1. **Image** the gel following staining with the first gel stain.
- 2. **Rinse** the gel with ultrapure water for 5 minutes. Repeat one more time.
- 3. **Incubate** gel with 1X eLuminol<sup>™</sup> sain solution (50~80 mL) at room temperature for 90 min with shaking.
- 4. **Wash** gel with 100 mL wash solution (10% methanol, 7% acetic acid) for 20 min with shaking.
- 5. **Image** gel with a 300 nm UV transilluminator, blue light transilluminator or a laser scanner.
